

## S.R.Smith Pool Lighting Serial Number Location

The serial numbers for S.R. Smith LED Lighting products can be found on the outside carton of the individual products next to the product SKU label. This includes all TREO, FG (Fiberglass), TREO Micro, kēlo, and Mod-Lite® lighting products as well as all Power Tower (PT-6001/6002) and poolLUX transformers and lighting controls (PLX-PW/PL, and PLX-PRM).

If for some reason the carton serial number labels are illegible, the actual serial numbers on the products may be found in the following locations:

### **TREO, Fiberglass, kēlo Pool Lights**

The serial number will be found on the side of the black body that fits into the wall fitting and will not be visible once the light is installed without removal. In the case of the FG Light, the black lamp housing will need to be unscrewed from the threaded white cassette (niche) to view the label.

- TREO and Fiberglass light serial numbers will be formatted as 315xxxxxx
- Kelo light serial numbers will be formatted as 330xxxxxx

### **TREO Micro Pool Lights**

The serial number will be imprinted on the label applied to the side of the translucent body that fits into the custom wall fitting and will not be visible once the light is installed without removal.

- TREO Micro light serial numbers will be formatted as 320xxxxxx

### **Mod-Lite® with PowerPass® Wireless Technology**

On new complete lights, the serial number labels can be found in two places - the back of the PowerPass emitter flange which is not visible once installed as well as the back of the Trim Plate flange on the lamp module it was originally shipped with.

- Mod-Lite serial numbers will be formatted as 335xxxxxx

### **Power Tower PT-6001/PT-6002 Fiber to LED Conversion Kits**

The serial number can be found on the product model and specs label on the back of the tower, above the cutout for the toggle control switches.

- PT-6001 serial numbers will be formatted as 218xxxxxx
- PT-6002 serial numbers will be formatted as 220xxxxxx

### **poolLUX™, poolLUX™ Plus and poolLUX™ Plus2 Power Transformers (PLX-PW/PL)**

The serial number can be found on the inside of the front cover panel. To gain access, with strong finger pressure, open the enclosure by pulling the front cover off evenly by the top and bottom tabs. Do not angle or 'hinge' the cover excessively when removing or damage may occur. If you cannot open the enclosure by hand, use a coin or flat blade screwdriver to twist open the finger tabs of the cover at the top and bottom of the unit.

- poolLUX Power and poolLUX Plus serial numbers will be formatted as 216xxxxxx

### **poolLUX™ Premier Custom Lighting System (PLX-PRM)**

The serial number can be found on the ceiling of the main low voltage wiring bay where the light cord make their electrical connection. To gain access, open the enclosure by unscrewing the six (6) panel cover screws with a straight blade screwdriver; DO NOT USE A POWER DRIVER. Gently separate and support the front cover as it will still be connected by a ribbon cable to the main enclosure.

- PLX-PRM serial numbers will be formatted as 214xxxxxx
