

Mod-Lite Installation Testimonial

Pool Type:	Concrete (Gunite)
Pool Size:	28x18
Pool Interior color & type:	Caribbean Light Blue, Pebble Tech
Qty of lights:	2 Mod-Lite, 1 micro in Spa

WHAT is the application in this case and WHY did you choose Mod-Lite?

“It is hard to find a light that will fit into reduced conduit, which can be found on fiber to LED upgrade installs. I had previously converted this pool from fiber to LED using the S.R.Smith micro LED because it was the only good light that would fit in the reduced conduit, but the micro is a 2 watt accent light and I wanted something brighter. Mod-Lite fit into the reduced conduit that the original fiber installer put in place. Mod-Lite was brighter than the original fiber installation, even when it was new! I also chose Mod-Lite because it has a wireless light module which makes future upgrades easier. The custom face plate options included with the Mod-Lite are really nice. I went with the round gray one. It looks really nice.”

Key Observations

“Actual Mod-Lite installations are straight forward but it is important to measure the face-to-stop distance to determine whether or not to use the foam spacer included. It could put unnecessary pressure on the power emitter / lamp module interface and is really only necessary for fittings with a face-to-stop distance in excess of 1 inch.”

In summary, what would you say about Mod-Lite?

“Mod-Lite’s fit reduced conduit from original fiber installations and offer a greater amount of LIGHT! Very Satisfied...”

MOD-LITE™

Mod-Lite™ is a transformational LED lighting product that seamlessly blends modular design with wireless power to deliver unmatched flexibility, convenience, safety and savings.
